Telecommunications, Communications

- Satellite Communications

### Software QA Manager

Experience Team handling 7+ QA (Junior ,Intern) and implement processes, maintaining a system for testing the products and/or development procedures of the organisation for quality and dependability.

Industry : Product based (VOIP service Domain)

- > Client communication / QA release delivery
- > Implement regression cover Test plan
- > UAT - Acceptance Testing
- > Test / Retest all assigned scenarios
- > Determine if assigned scenarios pass or fail and record findings on the scenario tracker
- > Provide detailed description of scenarios that failed
- > Delivery of defined operation processes for clients ensuring that all service levels are met or exceeded.
- > Monitor process delivery, resolving issues that might impact on SLA delivery.
- > Raise any issues immediately that might impact SLA delivery that is outside of my remit to resolve.
- > Raise issues in IMS as per defined priority and severity.
- > Working with the operations team lead to identify and implement processes and changes to processes that support the effectiveness of the team.

July 2021 — June  
2022  
1 year

- > Identify and suggest improvements that will enhance the service we provide to clients.
- > Maintain details of system failures, recording problems and identifying remedial action plans.
- > Maintain ISO standards.
- > Following processes on the SAP and ERP modules, performing different checks according to constraints defined in the SLA and providing the effective resolution.
- > Working on the CRM module and calculate the statistical data according to SLA and raising the IMS for unsolved problem.

## **Stemmons Enterprise LLC**

India, [www.stemmonsservices.com/](http://www.stemmonsservices.com/)

### **Senior Software QA and Tester**

Experience with ERP baseline system, using test automation (Selenium). Pure C#, NUNIT, Test planning, Test setup, Service quality control, Ms SQL Database Testing, Functional Trigger Testing, and Performance and System Testing, Test Planning, Test Configuration, Quality of Service Assurance.

Industry : Product based (Tenant leases) Domain

#### **Roles & Responsibilities :**

- Reading & Understanding the all documents and Project Requirements
- Base on the Documents write the test cases
- Preparing the checklist base on the requirements, then forwarding developer
- Continuously follow-up with designer/developer about the project progress
- After Development/Module Completed, Review/Overview of the System
- Once review system, afterwards start testing base on the created the test cases
- Daily Bug Report Maintain of the different project
- Follow the QA Process / Agile Methodologies
- Support to Team
- Meet the project deadlines.

#### **Technology Skills :**

- Testing : Manual & Automation Web & Mobile Testing | UI/UX | Responsive | API | Database | Automation | Third Eye Testing
- Bug Tracking Tools : JIRA | Red mine | Mantis
- Methodology Known: Agile/Scrum
- Project Management Tools : JIRA
- Others : Writing the Test Cases | Test Plan | RTM | Sign-Off Report

#### **Process :**

- Any New Project/Existing Project with new requirements come in company, BA team is ready FRS.
- Once FRS final by client, BA team will an arrange RM(Retro Meeting) of that project or requirements,Involve whole team(PM, Designer, Developer, QA) assign that project in meeting. BA team explains about the client, business requirements and if any deadlines of that projects.
- After meeting done, If we have any query or question they are ask to client send to POC(Point Of Contact) mail to client, Client know to very well whose designer, developer and QA person involve in his/her project. All Communication by Skype and mail.
- After the development, Testing done, Testing team will be generate the FR(Final Round) .
