## WORK EXPERIENCE

---

### Php Developer

Dec 2021 – Present

Impero IT services pvt. Ltd., Ahmedabad, India

- Led full application development lifecycles, delivering products on time and within budget.
- Performed unit testing on application components.
- Integrated third-party APIs into existing systems.
- Ensured that all coding practices followed industry best practices.
- Debugged existing code and optimized performance of the application.
- Optimized queries for better database performance.
- Designed user interfaces using AJAX technologies.
- Collaborated with other developers to design solutions for complex problems.
- Created and maintained webpages utilizing HTML, CSS, JavaScript, and PHP.
- Planned and completed group projects, working smoothly with others.

## Php Developer

March 2021 – Nov 2021

### Netclues India, Ahmedabad, India

- Underwent a 6-month PHP training, but transitioned to laravel within 3 months after demonstrating proficiency.
- Worked as a Junior Developer on existing laravel projects, contributing to the maintenance and development of web applications.

## PROJECTS

---

### Promotion Rewards:

[Live website link](#)

- Promotion rewards is the project where users can earn points for scanning the shopping receipts, and turn those points into cash, when users redeem them for a gift card, or donate them to a charity.
- To scan the receipts we have used Amazon Textract API which converts receipts into text and give products, total amount, date etc. from the receipts and then implement an algorithm which matches receipts products with the application brands and products and give points accordingly to users.
- Back-end is on laravel and front-end app is on react-native in the project.

### Culture Club:

- Culture club project is for organization's internal use in which employees can create whiteboards and events for departments and invite other employees.
- In whiteboard all invited users can create multiple different types of posts and all the activity of the posts like Create, Update, Delete, Like, Comment is live using redis socket. Also, Whiteboard and whiteboard posts are draggable and users can arrange them accordingly like sticky notes on the desk.
- Only web interface is there in the project so the back-end is in laravel with redis socket and livewire.

### Ice2Hot:

[Live app link](#)

- ICE2HOT is the dating app designed for genuine connections in which users can get to know their matches through voice chat and on video call.
- For the video call we have used twilio libraries and it is a subscription based application so used InApp Purchase.
- There is only an app interface in the project so as a backend developer I have built an API in laravel.

## EDUCATION

---

<b>B.Tech</b> – <i>Information Technology (IT)</i> Nirma university (Ahmedabad)	2020
<b>Diploma</b> – <i>Information Technology (IT)</i> Nirma university (Ahmedabad)	2016
