Project Detail

CELL PHONE OPERATED LAND ROVER:-

In this project, the robot is controlled by a mobile phone that makes a call to the mobile phone attached to the robot

Conventionally, wireless-controlled robots use RF circuits, which have the drawbacks of limited working range, limited frequency range and limited control.

Use of a mobile phone for robotic control can overcome these limitations.

It provides the advantages of robust control, working range as large as the coverage area of the service provider, no interference with other controllers and up to twelve controls.
